VBASE Expands Base Oils Offerings

VBASE Oil Company announced the expansion of its high performance, sustainable base oil product line with the addition of new low viscosity offerings to complement the existing higher viscosity grades.

VBASE 32S and 46U bolster the base oil lineup providing lower viscosity grade options of high-performance saturated oils and high stability, high value unsaturated oils. With the addition of these two new products, VBASE Oil Company now offers base oil solutions from ISO VG 32 to 100 suitable for use in a range of environmentally acceptable lubricant applications.

VBASE Oil Company President and CEO, Jeffrey DiMaio said, *“With excellent feedback from industry on the performance of our current line of high viscosity base oils and in response to customer requests, we are pleased expand our base oil line with the addition of two lower viscosity grades. The market demand for high performance, environmentally acceptable lubricants continues to grow and VBASE is excited to aid our partners as they strive to offer sustainable lubricant solutions.”*

Based on Secondary Polyol Ester™ technology, VBASE base oils provide exceptional hydrolytic and oxidative stability. VBASE® base oils are biobased, biodegradable, non-toxic, non-bioaccumulating and certified NSF HX-1, making them suitable for use in food grade lubricants.
